

Granache grafted to a Sauvignon blanc root stock. I was in charge of collecting rate of growth data.

Columbia crest winery
Paterson, Wa
Arnaldo Pineda
Summer 2015

Introduction: As the operations intern I was in charge of the research blocks and insuring that they don't get tampered with by any machinery or work crews.

Summary: So much is need to run a vineyard and to produce high quality wine. Dealing with operation is knowing what is happening everyday and the following day. My job required me to know everything to provide accurate information to the research groups that arrive at the vineyard. Communicating with both operations and research help me keep everything on track. Knowing what both side need and wanted also helped prevent any damage to the experiments at Columbia Crest.
