

## L&W LLC. Quincy, WA Robert Lund Spring, 2017

**Introduction:** L&W LLC. is a smaller fruit and vegetable producing farm in Quincy Washington. L&W LLC. grows, corn, alfalfa hay, wheat, peas, beans, apples, pears, and cherries. I had an opportunity to be involved in the cherries, apples, pears, and some of their hay.

### Responsibilities:

- Managing a pruning crew
- Mow Old Hay
- Observe the grafting Process
- Meeting with a field representative
- Spraying in an orchard
- Prepping Irrigation systems
- Flailing Brush

### Summary:

This internship was a great opportunity to learn many different aspects of different crop types. Overall this experience has helped me greatly to be a more effective farm manager after I graduate. My pictures above show some of the great parts of my internship, but there were many more. I learned a great deal on the importance of communication in the work place and many new skills with my time at L&W LLC. and I am very grateful to all who helped me while I was there. I learned how to spray, tractor maintenance, irrigation prepping, communication techniques, and so many more skills that will likely help me in the future. I would like to thank Bill Watson for the great internship and all the others who helped me while I was there.
